1. What the Tool Does

The Social Media Content Tracker (SMT) is a desktop tool that turns your daily Instagram monitoring routine into an automated pipeline. You drop screenshots from your business partners' Instagram accounts into the tool, tag each one with metadata (who posted it, which brand, what type of post), and at the end of the day or week the tool produces an organized folder ready to drag into Google Drive plus an Excel sheet matching your existing reporting format.

Before this tool: You manually renamed every screenshot following the format `Date_Customer_Brand`, created folders for each customer in Google Drive, dragged the right files into the right folders, then opened a Google Sheet and typed one row per upload — Customer, Brand, Number of Posts, Type, Content Type, Content Source, file links, and Date. A typical day took 60–90 minutes of repetitive work.

After this tool: You drag screenshots into the app, tag them with 6 dropdowns, and click Upload. The tool renames every file correctly, organizes them into a `Customer/Date/files` folder hierarchy, and writes the spreadsheet row for you. One click at the end of the day produces a ready-to-share ZIP plus Excel file. The same workload now takes 10–15 minutes.

Key capabilities:

Capability	Detail
Drag & drop upload	Drop image/video files; tag with metadata; submit
Multi-brand tagging	One screenshot can be tagged with 1 or many brands at once
Automatic file renaming	Files renamed to <code>Brand_PostType.ext</code> format
Session-based workflow	Group uploads into named batches (e.g. "Week 21")
Organized ZIP export	Folder per partner, sub-folder per date, files renamed
Excel export per session	Matches your existing Google Sheet column format
Monthly summary report	4-sheet Excel with partner activity, brand activity, totals
Permanent searchable history	Every record stays in the database forever
Customer & brand memory	Auto-suggests names you've used before to prevent typos
100% local	Runs on your laptop, no cloud, no subscription, no internet required

2. How It Works — Overview

```
You open the app in your browser
↓
Start a Session and name it (e.g. "Week 21")
↓
For each Instagram finding:
- Drag screenshots into the drop zone
- Tag Customer + Brands + Date + Type + Content Type + Source
- Click "Upload & Save"
↓
Tool automatically:
- Renames files to "Brand_PostType.ext"
- Stores them privately on your laptop
- Writes a record in the database
↓
When done, click "Close & Export Session"
↓
ZIP file downloads to your computer:
  Session_{Name}/
    records.xlsx
    {Customer}/{Date}/{renamed files}
↓
You drag the folders into Google Drive — done
```

3. The Core Concept: Sessions

A **session** is the most important idea in this tool. Think of a session as a labeled folder on your desk that you fill with paperwork over a day or a week, then close and file away.

Stage	What happens
OPEN	You start a session and give it a name. All uploads you make now belong to this session.
ACTIVE	You can upload as many records as you want. The session keeps tracking everything.
CLOSED	You click "Close & Export Session" — the tool builds your ZIP and locks the session as read-only history.
ARCHIVED	The session lives in the Sessions room forever. You can re-download its export anytime or browse its records.

Rules:

- Only **one session can be open at a time**. This prevents confusion about where uploads are going.
- You cannot upload anything if no session is open — the tool will prompt you to start one.
- A closed session can still be viewed and re-exported, but you cannot add new uploads to it.
- Closing a session **automatically triggers the export download**.

4. The Four Rooms (Pages)

The left sidebar has four main rooms you navigate between:

Dashboard

The home page. Shows:

- The currently active session (or a "Start New Session" card if none is open)
- 4 stat cards: Total Records, Active Customers, Posts This Month, Most Active Brand
- A 30-day upload activity line chart
- A "Top Brands" list
- The **Monthly Summary Report** export card
- A "Recent Uploads" preview table

Upload

The workshop. Shows:

- A drag-and-drop zone on the left for files
- A metadata form on the right
- A session badge at the top reminding you which session is active
- If no session is open, this page is gated with a friendly prompt to go back to the Dashboard

Sessions

The archive of all sessions you've ever run. Shows:

- A "Start new session" card at top
- Filter tabs: All / Open / Closed
- A card grid of every session with status, dates, record count, and action buttons
- Click any session card to see its detail page with the records inside and a "Download Export" button

Records

The firehose view. Shows every single upload record from every session in one big sortable table. You can:

- Filter by Customer name (text input)
 - Filter by Brand name (text input)
 - Filter by date range
 - Filter by session (dropdown)
 - Sort by any column
 - Delete individual records
-

5. Daily Workflow — Step by Step

This is the routine you will follow most days.

Step 1: Start a Session

1. Open the app in your browser (Dashboard appears)
2. Find the "No active session" card at the top
3. Type a name for the session — anything descriptive works:

- Week 21
- Mon-Tue 18-May
- Daily Check 18-05-2026

4. Click **"Start New Session"**

The card transforms into a glowing blue **ACTIVE SESSION** card showing the session name and statistics.

Important: You can only have one open session at a time. If a session is already open and you want to start a new one, you must close the current one first.

Step 2: Do Your Instagram Monitoring

This part of the workflow does not change. You:

1. Log into your company Instagram account
2. Visit each business partner's profile
3. When you spot a post featuring one of your brands, screenshot it (or screen-record if it's a video/Reel)
4. Repeat for every partner on your list

Save all screenshots/recordings to a folder on your desktop. They can keep their default names (like `IMG_2391.PNG` or `Screen Recording 2026-05-18.mov`) — the tool will rename them automatically.

Step 3: Upload Each Finding

For each partner/post you found:

1. Click **"Upload"** in the sidebar
2. Drag the screenshots for this one partner/post into the drop zone (or click to browse)
3. Fill the metadata form on the right:
 - **Customer:** start typing — the dropdown will suggest names you've used before
 - **Brands:** type a brand, press Enter to add as a chip. Add more if the post features multiple brands.
 - **Date:** defaults to today; change if the post was from a different day
 - **Type:** Stories / Reels / Posts
 - **Content Type:** Product IMG / Campaign IMG/VID / Store IMG (w/ brand) / Sales / Other (?)
 - **Content Source:** Brand / Customer / Others (?)
4. Click **"Upload & Save"**

The form clears, ready for the next partner. Each upload takes about 15 seconds.

Step 4: Close & Export the Session

When you've finished logging all of today's findings:

1. Go back to the **Dashboard**
2. The active session card now shows the totals (e.g. "12 records · 38 files")
3. Click the big blue **"Close & Export Session"** button
4. Confirm the prompt
5. A ZIP file downloads automatically to your Downloads folder

The session is now closed and shows up in the Sessions room as a permanent historical record.

6. The Upload Form Explained

Each field on the form has a specific role. Here's what they mean and how they're used.

Customer

The name of the **Business Partner** whose Instagram account you saw the post on. Examples from your data:

- PopUp
- Shift
- Vitruta
- Brux
- Poison Drop
- Sneaker District AD
- Vegnonveg
- Personage

The field is a **searchable combobox**. As you type, the tool suggests names you've used before. You can also type a brand-new partner name — the tool will remember it for next time.

Brands (Multi-Select)

The brand(s) **featured in the post**. Unlike Customer, this is a **multi-tag picker** — you can add one brand or many. Examples:

- Single brand: CarharttWIP
- Two brands: CarharttWIP , Edwin
- Four brands: Gramicci , Market , Twojeys , HUF

How to add a brand: type the name, press **Enter** (or click a suggestion). The brand appears as a removable chip. To remove, click the x on the chip.

This is required — at least one brand must be tagged before you can submit.

Date

The date the post was uploaded by the business partner. Defaults to today. Format is **DD-MM-YYYY**.

Type (Post Type)

What kind of Instagram post it is:

Value	Description
Stories	A 24-hour Story post
Reels	A Reel (short video)
Posts	A regular feed post (single image or carousel)

This value is used in the file name (see Section 7).

Content Type

What the content actually shows:

Value	Description
Product IMG	A product photo (the brand's product on its own)
Campaign IMG/VID	A branded campaign image or video
Store IMG (w/ brand)	A photo from the partner's store showing the brand
Sales	A sales-focused post (discounts, promotions)
Other (?)	Anything that doesn't fit the above

Content Source

Who created the content:

Value	Description
Brand	The brand created the content and the partner shared it
Customer	The business partner created the content themselves
Others (?)	Unknown or third-party content

7. File Renaming Rules

When you upload files, the tool automatically renames them following a strict format:

```
Brand_PostType.ext
```

The file's original name is replaced. The new name is built from your form input.

Single Brand

If you tagged only one brand:

Original name	Brand	Post Type	New name
IMG_2391.PNG	CarharttWIP	Stories	CarharttWIP_Stories.png
Screen_Rec.mov	Edwin	Reels	Edwin_Reels.mov
photo.jpg	Gramicci	Posts	Gramicci_Posts.jpg

Multiple Brands

If you tagged multiple brands, they are joined with underscores in the order you added them:

Brands tagged	Post Type	New name
CarharttWIP, Edwin	Stories	CarharttWIP_Edwin_Stories.png
Gramicci, Market, Twojeys, HUF	Stories	Gramicci_Market_Twojeys_HUF_Stories.png
Ripndip, The Hundreds	Reels	Ripndip_TheHundreds_Reels.mp4

Multiple Files Per Record

If you upload several files in a single record (same Customer + Brands + Type), the tool appends a number:

File count	Filenames
1 file	CarharttWIP_Stories.png
3 files	CarharttWIP_Stories_1.png , CarharttWIP_Stories_2.png , CarharttWIP_Stories_3.png
5 files	CarharttWIP_Stories_1.png through CarharttWIP_Stories_5.png

This prevents file collisions and keeps every screenshot uniquely named.

Note: The Customer name and Date are **not** in the filename — they live in the folder structure of the exported ZIP instead. This keeps file names short and consistent.

8. The Exported ZIP — Folder Structure

When you close a session, the tool downloads a ZIP file named after the session (e.g. `Session_Week-21.zip`).

When you unzip it, here is the exact structure you get:

```
Session_Week-21/  
  records.xlsx  
  PopUp/  
    17-05-2026/  
      CarharttWIP_Stories.png  
      Edwin_Stories.mp4  
    18-05-2026/  
      Arte_Stories.png  
  Brux/  
    18-05-2026/  
      CarharttWIP_Edwin_Stories.png  
  Vitruta/  
    17-05-2026/  
      Gramicci_Stories.png  
      CarharttWIP_Reels.mp4  
  Sneaker_District_AD/  
    18-05-2026/  
      Ripndip_TheHundreds_Reels.mp4
```

How to read it:

Folder level	Meaning
Top folder	The session name (e.g. <code>Session_Week-21</code>)
Layer 1	One folder per Business Partner
Layer 2	One folder per date (DD-MM-YYYY) inside that partner
Files	Your renamed screenshots/videos at the bottom

What to do with it:

1. Open Google Drive in your browser
2. Open your existing partner folders (PopUp, Brux, etc.)
3. Drag each partner folder from the ZIP into the matching Google Drive folder
4. The dated sub-folders go in cleanly with all files already correctly named

What used to take an hour now takes seconds.

9. The Excel File Inside the Export

Inside the top folder of the ZIP is a file called `records.xlsx`. Open it in Excel or Google Sheets and you will see a single sheet with these columns — **the exact same columns as your current Google Sheet**:

Column	Description
Customer	Business Partner name
Brand	Comma-joined list of brands (e.g. "CarharttWIP, Edwin")
Number of Posts Uploaded	How many files were uploaded in that record
Type	Stories / Reels / Posts
Content Type	Product IMG / Campaign IMG/VID / etc.
Content Source	Brand / Customer / Others (?)
Link to Content	The renamed filenames, comma-separated
Date	DD-MM-YYYY

Example rows:

Customer	Brand	# Posts	Type	Content Type	Source	Link to Content	Date
PopUp	CarharttWIP	1	Stories	Product IMG	Customer	CarharttWIP_Stories.png	17-05-2026
Brux	CarharttWIP, Edwin	1	Stories	Product IMG	Customer	CarharttWIP_Edwin_Stories.png	18-05-2026
Vitruta	Gramicci	1	Stories	Product IMG	Brand	Gramicci_Stories.png	17-05-2026

You can paste this directly into your master Google Sheet, or send it as-is.

10. Monthly Summary Report

At the bottom of the Dashboard there is an **orange card** labeled “Monthly Summary Report.” This is for end-of-month reporting to your manager.

How to Generate

1. Open the Dashboard
2. Scroll to the Monthly Summary Report card
3. Pick a **Month** from the dropdown (e.g. May)
4. Pick a **Year** from the dropdown (e.g. 2026)
5. Click “**Export Report**”

A file named `MonthlyReport_May_2026.xlsx` downloads to your computer.

What’s Inside the Excel

The file has **4 sheets** (tabs at the bottom of Excel):

Sheet 1 — Overview

A summary panel:

Metric	Value (example)
Report Period	May 2026
Total Records	87
Total Posts Tracked	245
Active Business Partners	18
Active Brands	9

Sheet 2 — By Business Partner

One row per partner that was active in the chosen month. Sorted by total posts descending.

Column	Meaning
Business Partner	Customer name
Brands Posted	Comma-joined list of every brand they featured
# of Brands	Count of distinct brands
Total Posts	Sum of all posts they uploaded
Stories / Reels / Posts	Breakdown by post type
Upload Sessions	How many separate records you logged
Active Days	Distinct days they posted

Sheet 3 — By Brand

The same idea, flipped — one row per brand. Sorted by total posts.

Column	Meaning
Brand	Brand name
Total Posts	Sum of posts featuring that brand
# of Partners	Count of partners that carried it
Partners	Comma-joined list of partner names
Stories / Reels / Posts	Type breakdown

Sheet 4 — All Records

Every individual record from that month in the standard Google Sheet format (same columns as the session export). This is the full audit trail.

When to use this

End of every month. Two clicks gives you a complete report showing:

- Which Business Partners were active
- What brands each one posted
- How many posts each one uploaded
- Plus the full row-by-row audit

Attach to an email and send.

11. Managing Sessions

Past sessions never disappear. You can revisit them anytime from the **Sessions** room.

Re-Downloading a Past Session

Sometimes a teammate loses the ZIP file, or you need to re-share an old export. To get it back:

1. Click **"Sessions"** in the sidebar
2. Find the session card you want
3. Click **"Download Export"** on that card

The ZIP regenerates fresh with the exact same content as the original export.

Deleting a Session

If a session was created by mistake or contains test data you want to remove:

1. Click **"Sessions"**
2. Find the session card
3. Click the trash icon
4. Confirm the deletion

Warning: Deleting a session removes: - The session itself - All records inside the session - All uploaded files on disk for those records
This cannot be undone. Make sure you really want to delete before confirming.

12. Searching & Filtering Records

When you need to find old uploads without going through sessions, use the **Records** page.

It shows every record from every session in one big sortable table. Filters at the top:

Filter	What it does
Customer	Type a name (or partial) to show only that customer's rows
Brand	Type a brand to show only rows featuring it
From Date	Start of the date range
To Date	End of the date range
Session	Dropdown to limit results to a specific session

You can combine filters — e.g. "show me every Vitruta + Gramicci record from March 2026."

Click any column header to sort by that column. Click the trash icon on a row to delete that one record.

13. Backup & Data Storage

All your data lives in two folders inside the tool's directory on your laptop:

```
social-media-tracker/  
  data/  
    tracker.db      ← every record you have ever logged  
  uploads/  
    {many folders} ← all your renamed screenshots/videos
```

To back up: Copy these two folders to an external drive, USB stick, or cloud backup once a week. That's the complete backup.

To restore on a new computer: Install the tool fresh on the new machine, then copy these two folders into the new tool's directory. All your sessions, records, and files come right back.

To delete everything: Quit the app, delete the `data/` and `uploads/` folders, restart the app. The tool starts fresh.

The tool never deletes anything on its own. Sessions and records remain in the database permanently until you choose to delete them.

14. Troubleshooting — Common Problems & Fixes

Problem	Cause	Fix
Can't upload — "No active session" message	No session is open	Go to Dashboard, start a new session
Brand chip won't add	You forgot to press Enter	Type the brand, then press Enter or click a suggestion
Wrong date on a record	You forgot to change the date before submitting	Delete the record, re-upload with correct date
Session won't close	Network or browser issue	Refresh the page and try again — your data is safe
ZIP didn't download	Browser blocked the popup	Allow popups for localhost in your browser settings
Excel column order wrong	You opened a different file	Open <code>records.xlsx</code> from inside the session ZIP, not from elsewhere
Customer/brand suggestion missing	First time you've used that name	The tool remembers it after the first upload
File too large to upload	Single file over 4 MB	Compress the video or split into multiple uploads
Need to recover a deleted record	Deletion is permanent	Restore from your backup of <code>data/</code> and <code>uploads/</code>
Tool won't start (port in use)	Another app on port 3000	Quit other apps using that port, or restart your laptop

15. Quick Reference Card

A one-page cheat sheet to keep next to your laptop.

DAILY WORKFLOW

1. Dashboard → Start New Session (name it)
2. Upload page → for each finding:
 - Drag screenshots
 - Pick Customer (autocomplete)
 - Add Brand chips (press Enter to add)
 - Set Date / Type / Content Type / Source
 - Click "Upload & Save"
3. Dashboard → "Close & Export Session"
4. ZIP downloads → drag folders to Google Drive

FILE NAMING RULE

1 brand: {Brand}_{PostType}.ext
 2+ brands: {Brand1}_{Brand2}_..._{PostType}.ext
 Multi-file: append _1, _2, _3 before extension

Examples:

CarharttWIP_Stories.png
 CarharttWIP_Edwin_Reels.mp4
 Gramicci_Market_Twojeys_HUF_Stories.png
 CarharttWIP_Stories_1.png (when 3+ files)

EXPORT FOLDER STRUCTURE

Session_{Name}/
 records.xlsx
 {Customer}/
 {DD-MM-YYYY}/
 {Brand_PostType}.ext

MONTHLY REPORT

Dashboard → orange card at bottom
 → Pick Month + Year → Click "Export Report"
 → 4-sheet Excel: Overview / By Partner / By Brand / All

BACKUP

Copy these two folders weekly:
 social-media-tracker/data/
 social-media-tracker/uploads/

16. Appendix A — Field Reference

Complete list of every field in the system and where it lives.

Field	Where Set	Stored As	Used In
Session Name	Dashboard "Start New Session" input	Plain text	ZIP folder name
Session Status	Auto-set by tool	open / closed	Filters, badges
Customer	Upload form combobox	Plain text	Folder name in ZIP, Excel column
Brands	Upload form multi-tag picker	JSON array	Filename, Excel column
Date	Upload form date picker	DD-MM-YYYY	Sub-folder name in ZIP, Excel column
Type	Upload form dropdown	Stories / Reels / Posts	Filename suffix, Excel column
Content Type	Upload form dropdown	One of 5 values	Excel column
Content Source	Upload form dropdown	Brand / Customer / Others (?)	Excel column
Files	Drag-drop in Upload	Renamed and stored on disk	Files in ZIP
Number of Posts	Auto-calculated	Count of files in record	Excel column
Created At	Auto-stamped	ISO timestamp	Sorting in Records page

17. Appendix B — Full Feature List

Everything the tool supports, in one list.

Sessions

- Manual start with custom name
- Manual close that triggers export
- One open session enforced at a time
- Re-download export for any past session
- Delete a session (cascades to files + records)
- View session detail page with embedded records table

Upload

- Drag-and-drop or click-to-browse

- Multiple files per upload session
- Image and video files supported
- Automatic file renaming following `Brand_PostType` rule
- Multi-brand tagging via chip picker
- Customer and Brand autocomplete from past entries
- Required-field validation before submit
- Session gating (cannot upload without open session)

Records

- Full sortable table of every record across all sessions
- Filter by Customer, Brand, date range, and session
- Pagination for large datasets
- Inline delete per row
- Multi-brand chips rendered in the Brand column
- Type displayed as a colored pill (Stories blue, Reels purple, Posts green)

Exports

- Per-session ZIP with `Customer/Date/files` structure
- Per-session Excel matching the Google Sheet column format
- Monthly Summary Report with 4 sheets (Overview, By Partner, By Brand, All Records)
- Re-export from Sessions room anytime
- All exports include the renamed filenames

Dashboard

- Active session hero card with live record + file counts
- Quick “Start New Session” inline form
- 4 stat cards: Total Records, Active Customers, Posts This Month, Most Active Brand
- 30-day upload activity line chart
- Top Brands horizontal bar list
- Monthly Summary Report card with month/year picker
- Recent Uploads preview table

Data

- Local SQLite database (no cloud, no account)
- Permanent storage — nothing auto-deletes
- Customer and Brand lookup tables grow as you use the tool
- Backup by copying two folders (`data/` and `uploads/`)
- Full data ownership — everything on your laptop

Interface

- Light-theme modern dashboard design
- Sidebar navigation with 4 main rooms
- Plus Jakarta Sans + Inter typography
- Blue gradient accents

- Responsive cards and tables
- Works offline once installed (no internet needed for daily use)
